

RECYCLiT
The UNIQUE Kitchen Waste Chute System

Operation Instructions

OPERATION INSTRUCTIONS

To ensure best results please follow our simple Operation and Maintenance Information.

Recyclit's UNIQUE combination and use of a free resource called gravity (which transports the waste to the bin) and the Venturi principle (which extracts odours and heat) from your system constantly, Recyclit also has No operating costs with only 1 moving part. Imagine just in savings from the purchase of a kitchen cupboard cabinet to hide your kitchen tidy and storage bins & the continual purchase of bin liners and garbage bags, which are one of the environments worst enemies, Recyclit will even pay for itself over time. It couldn't be easier or simpler!

To use your new Recyclit Unique Kitchen Waste Chute System, simply post your waste or recycling article into the nominated flip door which is usually installed in a very convenient position on your kitchen wall, bench top, cabinet or pantry etc., holding the wasted article in your hand, gently push the nominated stainless steel flip door open with the back of your hand until the flip door is opened wide enough to dispose of your Waste Recycling or Compost.

Once you have released the wasted article remove your hand away from the door, and the door will close slowly forming an air tight seal. It is critical that the door closes fully, this allows the external venturi venting system to start extracting odours and heat from your Recyclit system and your council wheelie bins 24hrs a day 7 days a week.
